EDUCATION

UNIVERSIDAD DEL SALVADOR
MEDICINE BACHELOR OF MEDICINE

April 2009 - June 2019
Buenos Aires, Argentina

EXPERIENCE

COTY | DATA ANALYST FORECASTING

Barcelona | May 2024 – Present

- Owned end-to-end analytics for global giftset campaigns (multi-million units), driving allocation, launch readiness, and risk mitigation decisions across dozens of markets and senior stakeholders
- Established and led a structured forecast challenge framework, stress-testing market assumptions against historical performance and in-season signals, improving forecast quality and downstream supply decisions
- Designed and scaled a Quota vs Forecast decision system (Power BI + SQL + Python) used by Supply, Finance, and Commercial teams as a primary decision tool, enabling earlier interventions and reducing Value at Risk (VAR) by double digits
- Led advanced demand analysis under uncertainty, applying statistical techniques (trend decomposition, correlation analysis, anomaly detection) to support scenario planning and campaign phasing
- Built and productionized automated data pipelines consolidating multi-source inputs, reducing manual effort by ~80% and accelerating executive decision-making cycles
- Acted as a strategic partner to cross-functional stakeholders, translating ambiguous business questions into structured analytical approaches and clear, actionable recommendations

Tech stack: MS Excel, Power BI, Python (pandas, NumPy, matplotlib, seaborn, scikit-learn), SQL, SAP S/4HANA, og Solutions, JDA / BlueYonder

PANASONIC | DATA ANALYST FORECASTING & REPORTING

Barcelona, Spain | August 2021 – April 2024

- Owned data extraction, validation, and transformation workflows from SAP BW and POS systems to support forecasting and commercial decision-making across Iberia
- Designed and maintained KPI dashboards (Excel & Power BI) to track sell-in/sell-out performance and forecast accuracy, improving visibility and decision speed for Sales and Marketing teams
- Automated recurring data processes using Python and VBA, reducing manual workload by ~40% and improving reporting reliability
- Partnered cross-functionally with Sales, Marketing, and Finance to analyze forecast deviations, identify demand gaps, and drive data-informed corrective actions
- Developed and optimized SQL queries for large-scale data extraction and ad-hoc analysis, enabling faster access to critical business insights
- Led initiatives to improve data quality and standardize reporting, increasing consistency and trust in analytics outputs across the planning function

VARIOUS EMPLOYERS | EARLY CAREER EXPERIENCE (ADMINISTRATIVE & TEACHING ROLES)
Argentina | 2010 – 2021

Buenos Aires,

Various positions in Argentina (2009-2021) focused on operations, coordination, and stakeholder communication.

SKILLS

PROGRAMMING LANGUAGES	Python, SQL, VBA
LIBRARIES/Frameworks	pandas, NumPy, matplotlib, seaborn, scikit-learn, streamlit
TOOLS / PLATFORMS	Microsoft Excel, Visual Studio Code, Jupyter Notebooks, Power BI, Git
DATABASES	Microsoft SQL Server, MySQL, SQLite

PROJECTS / OPEN-SOURCE

PREDICTING FALCON 9 FIRST-STAGE REUSABILITY | [LINK](#)

Python, Jupyter Notebooks

Data-driven prediction of Falcon 9 first-stage reusability **to support launch cost estimation** and strategic decision-making.

INSTANT BOOKING A/B TEST | [LINK](#)

Python, Jupyter Notebooks, A/B Testing

A/B test analysis of an Instant Booking feature in a **two-sided marketplace**, evaluating its **impact on booking conversion and supply-side health**, with a focus on balancing user experience improvements and ecosystem stability.

FINTECH A/B TEST | [LINK](#)

Python, Jupyter Notebooks

End-to-end A/B testing case study simulating a Revolut-style product experiment on first top-up conversion. Includes **experiment design, statistical testing, effect size analysis, and business interpretation** fully reproducible in Python.

E-COMMERCE REVENUE PIPELINE | [LINK](#)

Python, Power BI

Production-style **data pipeline for cleaning and validating e-commerce transactional data**, converting raw inputs into reliable, analysis-ready datasets **for business reporting and decision-making**.

FINTECH PRODUCT ANALYTICS | [LINK](#)

SQL, Power BI

A one-page **Product Analytics dashboard** built to analyze **growth, engagement, and monetization** for a fintech-style application using **SQL Server and Power BI**.

CHURN ANALYSIS DASHBOARD | [LINK](#)

Power BI, Excel

This Power BI project explores customer churn behavior using a telecom dataset. The goal is to identify key factors influencing churn, highlight high-risk customer segments, **and provide actionable insights** to support retention strategies.

STROKE RISK PREDICTION | [LINK](#)

Python, Jupyter Notebooks, Machine Learning

Decision-aware stroke risk scoring engine built with **scikit-learn**, featuring cost-sensitive threshold optimization.

WEB ANALYTICS A/B TEST | [LINK](#)

Python, Jupyter Notebooks

This project presents an **end-to-end A/B testing analysis** using Python, framed around a realistic **web analytics** use case.

CUSTOMER CHURN PREDICTION | [LINK](#)

Jupyter Notebooks, Python

Predicting customer churn using machine learning with the Telco dataset. Complete data science pipeline **from EDA to model evaluation** (Logistic Regression, Random Forest, XGBoost), with feature importance analysis and performance metrics.

CERTIFICATIONS

- FIRST English Certificate - Cambridge English.
- Google Advanced Data Analytics Specialization - **GOOGLE**
- Data Analytics, SQL and Power BI - Coder House.
- SQL (Advanced) - **HACKERRANK**

- Python (Basic) - **HACKERRANK**
- Introduction to Big Data - Centro de Estudios Adams BARCELONA SA.
- Backend Development and APIs - **FREECODECAMP**
