

IGNACIO SPREADICO

Data Analytics & Applied Data Science | Machine Learning & Automation | Python & SQL

PROFESSIONAL SUMMARY

Data Analyst with 5+ years of experience turning complex commercial and operational data into clear recommendations for senior and cross-functional stakeholders in consumer-goods environments. Strong in SQL, Python, Power BI, forecasting, statistical analysis and KPI design. Experienced leading analytics work independently, building scalable reporting and datasets, challenging assumptions, identifying performance drivers and risks, and translating findings into concise business narratives.

SKILLS

Commercial Analytics: Performance Analysis, KPI Design, Forecasting, Scenario Analysis, Trend Analysis, Root-Cause Analysis, Risk and Opportunity Identification

Data Analysis: SQL, Python, Power BI, DAX, Power Query, Excel, Exploratory Data Analysis, Statistical Analysis, Data Visualization

Statistics and Test-and-Learn: Hypothesis Testing, A/B Testing, Experiment Design, Correlation Analysis, Anomaly Detection

Data and Reporting: Data Modeling, ETL/ELT, dbt Core, Data Transformation, Data Quality, Dashboarding, Analytics-ready Datasets

Business Partnership: Executive Storytelling, Cross-functional Collaboration, Ad-hoc Analysis, Self-service Analytics, Commercial Decision Support

PROFESSIONAL EXPERIENCE

Data Analyst - Forecasting

Coty | Barcelona, Spain | May 2024 - Present

- Own end-to-end analytics for global consumer-goods campaigns spanning multi-million units and dozens of markets, using SQL, Python, Power BI and Excel to translate demand, commercial and operational signals into recommendations on allocation, launch readiness and risk mitigation.
- Designed and scaled a Quota vs Forecast decision system in Power BI, SQL and Python, defining actionable performance metrics and enabling earlier interventions that contributed to double-digit reductions in Value at Risk.
- Lead deep-dive analyses and structured forecast challenges using historical performance, in-season signals, trend analysis and scenario modelling to uncover drivers, challenge assumptions and inform commercial decisions.
- Built automated multi-source data workflows and reporting solutions using Python, SQL and Power BI, reducing manual effort by approximately 80% and improving the speed and consistency of recurring business reviews.
- Apply statistical techniques including trend decomposition, correlation analysis and anomaly detection to anticipate risks, identify opportunities and support decisions under uncertainty.
- Partner with Supply, Finance, Marketing and Commercial stakeholders across markets, presenting complex analysis as concise narratives and actionable recommendations for senior decision-makers.

Data Analyst - Forecasting & Reporting

Panasonic | Barcelona, Spain | August 2021 - April 2024

- Supported commercial performance and demand planning across Iberia using SQL, Power BI, Excel, SAP BW and POS data, connecting sell-in, sell-out and forecast signals to business decisions.
- Designed and maintained KPI dashboards in Power BI and Excel for Sales and Marketing stakeholders, improving visibility of commercial performance and accelerating corrective action.
- Automated recurring analytics and reporting workflows using Python and VBA, reducing manual workload by approximately 40% while improving reporting reliability.
- Developed SQL-based ad-hoc analyses and standardized data-quality processes, helping business teams investigate performance drivers and work from more consistent reporting definitions.

SELECTED PROJECTS

Demand Planning Analytics Platform: dbt, SQL, Python and Power BI project transforming retail and planning data into tested dimensional models and analytics-ready datasets for forecasting, inventory and commercial decisions.

Supply Delay Alerts: Python automation pipeline that validates order data, applies business rules to identify overdue deliveries, and generates actionable exception reports, with automated testing using pytest.

Instant Booking A/B Test: Marketplace experiment covering hypothesis design, statistical testing, conversion and supply-side metrics, and decision-oriented business interpretation.

Customer Churn Prediction: End-to-end machine learning project covering exploratory analysis, feature engineering, model training and evaluation for customer churn prediction.

EDUCATION

Bachelor of Medicine | Universidad del Salvador, Buenos Aires, Argentina | 2009 - 2019

CERTIFICATIONS

Google Advanced Data Analytics Specialization | IBM Data Science Professional Certificate | IBM Data Analyst | dbt Fundamentals (VS Code) | Data Analytics, SQL & Power BI - Coderhouse | Cambridge English: First Certificate
